

Arches, Circles and Shapes

Arched Windows

Every style of secondary in our range can be arched apart from the horizontal sliders.

Please note: Should a customer require a horizontal slider to be installed into an arched opening an arched lift out would be stacked on top of the horizontal unit.

Please note: Should a customer require a Tilt In Balanced Vertical Slider the top panel will always be fixed for health and safety, customer will need to be made aware of this prior to quote/order.

Please note: The outer frame section on an arched lift out is NOT the same section used for a standard square unit, the panel is held in place by turnbuttons the customer will need to be made aware of this prior to quote/order.

Please note: The handle on a Circular or full semi-circle Heritage Hinged Unit is a finger pull not a espag handle this is because the internal gearing used cannot be bent.

There are three types of arch we can produce:

- True Arch this is a symmetrical arch so the radius is the same all round
- Non True Arch is an arch with varying radius
- Gothic True Arch is a symmetrical gothic shaped arch, the shape of an gothic arch goes into a point at the top

If the arch is not a true arch we require a template or detailed drawing to be able to quote or manufacture accurately.

The timber sub frame is also arched as are the trims to be able to create a neat finish to the installed unit.

The trims for the arch are only available in MDF material, the customer needs to be made aware of this prior to quote or order especially if order is made up of several units as PVC trims will be standard on square units so option of timber needs to be made available to customer so windows look uniform.

Circular Windows

Only Insert, Lift Out and Heritage Hinged Units can be manufactured as circles

Please note: Should a customer require a circular Heritage Hinged Unit this will split into two sections and hinged at the centre line with finger pull to open the frames (see sectional detail).

Please note: The outer frame section on a circular lift out is NOT the same section used for a standard square unit, customer will need to be made aware of this prior to quote/order.

The timber sub frame on the Lift Out and Heritage Hinged Unit is also circular as are the trims to create a neat finish to the installed unit.

The trims for the circular units are only available in MDF material, the customer needs to be made aware of this prior to quote or order especially if order is made up of several units as PVC trims will be standard on square units so option of timber needs to be made available to customer so windows look uniform.

Arches, Circles and Shapes

Shaped Windows

Some styles of secondary in our range can be shaped. Shaped Units usually are diamond, triangle or units with corners notched out and this can be applied to the following style of secondary:

- Inserts; and
- Lift Outs.

Comprehensive drawing or a template would need to be provided prior to quote/order.

Raked Windows

Every style of secondary apart from the horizontal sliders can have a raked head, bottom or both applied. Raked is a term used to describe a window which has one side longer than the other.

Please note: Should a customer require a Tilt In Balanced Vertical Slider the top panel will always be fixed for health and safety, customer will need to be made aware of this prior to quote/order.
